ERTALYTE TX is a polyethylene terephthalate compound incorporating a uniformly dispersed solid lubricant. Its specific formulation makes it a premium internally lubricated bearing-grade. ERTALYTE TX not only has got an outstanding wear resistance, but offers incomparison with ERTALYTE an even lower coefficient of friction as well as higher pressure-velocity capabilities.

ENGINEERING PLASTIC PRODUCTS

Physical properties (indicative values *)

PROPERTIES Colour	Test methods	Units	VALUES pale grov
Colloui	-	-	pale grey
Density	ISO 1183-1	g/cm³	1.44
Water absorption:			
- after 24/96 h immersion in water of 23 °C (1)	ISO 62	mg	5/11
	ISO 62	%	0.06/0.13
- at saturation in air of 23°C / 50 % RH	-	%	0.23
- at saturation in water of 23 °C	-	%	0.47
Thermal Properties (2)			
Melting temperature (DSC, 10 °C/min)	ISO 11357-1/-3	°C	245
Glass transition temperature (DSC, 20 °C/min) - (3)	ISO 11357-1/-2	°C	-
Thermal conductivity at 23 °C	-	W/(K.m)	0.29
Coefficient of linear thermal expansion:			
- average value between 23 and 60 °C	-	m/(m.K)	65 x 10 ⁻⁶
- average value between 23 and 100 °C	-	m/(m.K)	85 x 10 ⁻⁶
Temperature of deflection under load:			
- method A: 1.8 MPa	ISO 75-1/-2	°C	75
Max. allowable service temperature in air:	-		
- for short periods (4)	-	°C /	160
- continuously : for 5,000 / 20,000 h (5)	-	°C(\	115/100
Min. service temperature (6)	-	°C	-20
Flammability (7):	<u> </u>		///
- "Oxygen Index"	ISO 4589-1/-2	%	25
- according to UL 94 (3 / 6 mm thickness)	- (-	HB / HB
Mechanical Properties at 23 °C (8)			
Tension test (9):		12	110
- tensile stress at yield / tensile stress at break (10)	ISO 527-1/-2	MPa	76/-
++	ISO 527-1/-2	MPa	76/-
- tensile strength (10)	ISO 527-1/-2	MPa	76
- tensile strain at yield (10)	ISO 527-1/-2	%	0/4
- tensile strain at break (10)	100 -00 414	%.<	5
tonono ottam at produc (10)	100 -0- 110	1%	5
- tensile modulus of elasticity (11)		MPa	3300
toriolio moduluo or oluoliony (11)	A	MPa	3300
Compression test (12):	100 027 172	110	0000
- compressive stress at 1 / 2 / 5 % nominal strain (11)	ISO 604	MPa	24 / 47 / 95
Creep test in tension (9):	100 004	Jivii u	24/4//00
- stress to produce 1 % strain in 1000 h ($\sigma_{1/1000}$)	ISO 899-1	MPa	23
+4	16 00	MPa	23
Charpy impact strength - Unnotched (13)	2.77	kJ/m²	30
		kJ/m²	2.5
Charpy impact strength - Notched 4 Izod impact strength - Notched 4		kJ/m²	2.5
izod impact strength - Notched		kJ/m²	2.5 2.5
		N/mm²	160
		N/mm² -	M 94
Rockwell hardness (14) Electrical Properties at 23 °C	100 2009-2	-	IVI 94
	IEC 60040 4	kV/mm	21
Volume registivity		kV/mm	21 > 10 ¹⁴
Volume resistivity		Ohm.cm	
Confess registivity		Ohm.cm	> 10 14
Surface resistivity		Ohm	> 10 ¹³
Poletics 2000 115 115 200 115 115 115 115 115 115 115 115 115 1		Ohm	> 10 ¹³
Relative permittivity ε_r : - at 100 Hz	.20 00200	-	3.4
+4		-	3.4
- at 1 MHz		-	3.2
+1		-	3.2
Dielectric dissipation factor tan δ: - at 100 Hz	EC 60250	-	0.001
++	· IEC 60250	-	0.001
- at 1 MHz	IEC 60250	-	0.014
++	- IEC 60250	-	0.014
Comparative tracking index (CTI)	· IEC 60112	-	600
	IEC 60112		600

Legend:

- values referring to dry material
- ++ : values referring to material in equilibrium with the standard atmosphere 23 °C / 50 % RH
- (1) According to method 1 of ISO 62 and done on discs \varnothing 50 x 3
- The figures given for these properties are for the most part derived from raw material supplier data and other publications.
- (3) Values for this property are only given here for amorphous materials and not for semi-crystalline ones.
- (4) Only for short time exposure (a few hours) in applications where no or only a very low load is applied to the material.
- (5) Temperature resistance over a period of 5,000/20,000 hours. After these periods of time, there is a decrease in tensile strength measured at 23 °C of about 50 % as compared with the original value. The temperature values given here are thus based on the thermal-oxidative degradation which takes place and causes a reduction in properties. Note, however, that the maximum allowable service temperature depends in many cases essentially on the duration and the magnitude of the mechanical stresses to which the material is subjected.
- (6) Impact strength decreasing with decreasing temperature, the minimum allowable service temperature is practically mainly determined by the extent to which the material is subjected to impact. The value given here is based on unfavourable impact conditions and may consequently not be considered as being the absolute practical limit.
- (7) These estimated ratings, derived from raw material supplier data and other publications, are not intended to reflect hazards presented by the material under actual fire conditions. There is no 'UL File Number' available for the ERTALYTE TX stock shapes.
- (8) The figures given for the properties of dry material (+) are for the most part average values of tests run on test specimens machined out of rods Ø 40 - 60 mm. Except for the hardness tests, the test specimens were then taken from an area mid between centre and outside diameter, with their length in longitudinal direction of the rod (parallel to the extrusion direction).

Considering the very low water absorption of ERTALYTE TX, the values for the mechanical and electrical properties of this material can be considered as being practically the same for dry (+) and moisture conditioned (++) test specimens.

- (9) Test specimens: Type 1 B
- (10) Test speed: 5 mm/min [chosen acc. to ISO 10350-1 as a function of the ductile behaviour of the material (tough or brittle)].
- (11) Test speed: 1 mm/min
- 12) Test specimens: cylinders Ø 12 x 30 mm
- Pendulum used: 15 J
- (14) Measured on 10 mm thick test specimens (discs), mid between centre and outside diameter.
- (15) Electrode configuration: \varnothing 25 / \varnothing 75 mm coaxial cylinders ; in transformer oil according to IEC 60296 ; 1 mm thick test specimens.
- This table is a valuable help in the choice of a material. The data listed here fall within the normal range of product properties. However, they are not guaranteed and they should not be used to establish material specification limits nor used alone as the basis of design.

Note: 1 g/cm³ = 1,000 kg/m³ ; 1 MPa = 1 N/mm² ; 1 kV/mm = 1 MV/m.

AVAILABILITY

Round Rods: Ø 10-200 mm - Plates: Thicknesses 8-100 mm - Tubes: O.D. 20-200 mm
