

# UNIBOARD

## LIGHTWEIGHT, WEATHERPROOF AND IMPACT RESISTANT CLADDING PANELS

Dotmar's **Uniboard** is a unique, thermoplastic alternative to traditional timber or rubber construction materials. **Uniboard** is almost indestructible, lightweight, weatherproof, rust, chemical and mould resistant. **Uniboard** also eliminates the need for regular weatherproofing and maintenance as required when using timber panels outdoors, providing long term cost savings.

**Uniboard** is easy to work with and can be cut, routed, drilled, and mechanically fastened with standard hardware materials such as screws and regular construction adhesives. The non-stick surface is aesthetically pleasing, cleans easily, is scratch resistant and allows for easy removal of graffiti where required.

### FEATURES AND BENEFITS

- Light weight – almost 10% lighter than plywood and marine ply.
- Easier handling and installation without specialized tooling requirements. (Rubber sheet in comparison is heavier, challenging to handle and work with and require specialized stretching tools to install correctly)
- Weatherproof - will not absorb water, swell or degrade.
- UV stable for harsh Australian conditions – will not become brittle or crack.
- Cost effective – no long term maintenance required.
- Easy to install – can be fastened with standard timber tools, or framed in steel panels for kit and portable round yards.
- Can be easily fitted and fastened to timber or steel posts and rails.
- The solid walls allow the horse to concentrate on the handler when being worked in the round yard.
- Reduced risk of injury to horses that kick out.
- Tasteless and Odorless - horses will have no desire to chew.
- Can be retrofit to existing structure used to support ply board/rubber panels  
- No design changes required.
- Available in Black

PE Delivery Program

Attractive stippled surface finish, one side Plain smooth finish other side

PE Sheet  
Thickness: 10, 12, 15 & 19mm  
Sizes: 2440 x 1220mm
